

Test Scenario: Logging In to the "Foodies" Application

Scenario Name: User Login Functionality

Objective

To ensure users can log in successfully with valid credentials and receive appropriate feedback for invalid login attempts.

Actors Involved

- End User: Anna Koper (example user)
- System: "Foodies" application

Preconditions

1. The user has an active account on the "Foodies" platform.
2. The application is available and accessible.
3. The user's account credentials (email and password) are known and valid.

Test Steps

1. Access the Login Page
 - Navigate to the "Foodies" application login page.
 - Verify that the login form is visible, with fields for email and password, and a "Login" button.
2. Enter Valid Credentials
 - Input the correct email address in the "Email" field (e.g., `aniakoper@gmail.com`).
 - Input the correct password in the "Password" field (e.g., `SecurePass123`).

The screenshot shows the "Foodies" application interface. At the top left is the "Foodies" logo. Below it are navigation links: "HOME", "TIME OF THE DAY", and "RECIPE". On the top right is a user profile icon. In the center, there is a "Login" modal form. The form has two input fields: the first contains the email address "aniakoper@gmail.com" and the second contains a masked password "*****". Below the password field is a "Login" button. At the bottom of the form, there is a link that says "Not a member? Register". To the right of the login form, there is a search bar with the placeholder text "Search recipes..." and a magnifying glass icon.

3. Submit Login Form
 - Click on the "Login" button.
 - Wait for the system to process the request.
4. Validate Successful Login

- Verify that the user is redirected to home page.
- Check for the availability of user-specific data (e.g., favourite recipes, profile, modifications, settings).

5. Test Error Feedback (Optional Negative Scenarios)

- Enter invalid email or password and click "Login."
- Verify appropriate error messages are displayed:

6. Session Validation

- Ensure that the user remains logged in across the session unless they explicitly log out.

Expected Results

1. Users with valid credentials can access their personalized profile.
2. Users with invalid credentials receive error messages.
3. The system prevents unauthorized access to user accounts.

Test Scenario: Sorting and Filtering Functionality in the "Foodies" Application

Scenario Name: Sorting and Filtering Recipes

Objective

To verify that users can effectively filter and sort recipes based on various parameters, such as diet, ingredients, calories, and ranking, and that the results are displayed correctly.

Actors Involved

- End User: Anna Koper (example user)
- System: "Foodies" application

Preconditions

1. The user is logged into the "Foodies" application.
2. The recipe database contains a variety of recipes with attributes such as dietary labels, calories, and rankings.

Test Steps

Filtering Recipes

1. Access Recipe Search Page
 - Navigate to the "Recipe" section.
 - Verify that the filtering options are visible.
2. Apply a Single Filter
 - Select a dietary filter (e.g., "Vegetarian").
 - Verify that only recipes tagged as "Vegetarian" are displayed.
3. Apply Multiple Filters
 - Select additional filters such as:
 - Calories: "Less than 1000 kcal"

The screenshot displays the 'Foodies' application's recipe search page. On the left, a 'Filters' sidebar is visible, containing sections for 'Diet Type' (with checkboxes for VEGAN, GLUTEN_FREE, VEGETARIAN, and LACTOSE_FREE), 'Meal Type' (a dropdown menu), and 'Calories' (a range selector with 'Min' and '1000' values, and an 'Apply' button). On the right, the 'Recipe List' section shows two recipe cards. The first card is for 'Beef Brisket Pot Roast', featuring a photo of the dish, its name, and nutritional information: 'Calories: 504' and 'Protein: 20g', with a star rating of 0. The second card is for 'Vegetarian Chilli', featuring a photo of the dish, its name, and nutritional information: 'Calories: 923' and 'Protein: 42g', with a star rating of 0.

- Verify that the displayed recipes satisfy all selected criteria.
4. Settle default filters on diets

- Go to user profile
- Choose favourite diets
- Mark diets which are your favourite

Sorting Recipes

5. Sort Recipes by Ranking

- Select the "Ranking (High to Low)" sorting option.
- Verify that recipes are displayed in descending order of their rankings.

6. Sort Recipes by Protein

- Select the "Protein(High to Low)" sorting option.

Recipe List

Rappie Pie

Calories: 7817
Protein: 661g
★ : 0

Irish stew

Calories: 9237
Protein: 645g
★ : 0

- Verify that recipes are displayed in descending order of their protein count.

7. Combine Sorting and Filtering

- Apply a filter (e.g., "Vegan").
- Sort the filtered results by "Protein (High to Low)."
- Verify that the recipes meet the filter criteria and are sorted correctly.

Expected Results

1. Filtering criteria are applied accurately, and the displayed recipes meet all selected conditions.
2. Sorting options rearrange recipes based on the chosen attribute (e.g., ranking, calories, or protein content).
3. Combining sorting and filtering works seamlessly, and results match both the filter and sort criteria.
4. Clearing filters restores the full list of recipes.

Postconditions

- The application retains the selected filters and sorting preferences until explicitly cleared or reset.
- The user can navigate back to the full recipe list after filtering and sorting.

Test Scenario: Substituting Ingredients in the "Foodies" Application

Scenario Name: Substituting Ingredients in Recipes

Objective

To ensure users can substitute ingredients in recipes and verify that substitutions are accurately reflected in the recipe details.

Actors Involved

- End User: Anna Koper (example user)
- System: "Foodies" application

Preconditions

1. The user is logged into their account on the "Foodies" platform.
2. The recipe substitution functionality is enabled and accessible.
3. The user has at least one recipe available to modify.

Test Steps

Substitute an Ingredient

1. Access Recipe Details
 - Navigate to a recipe (e.g., "Chivito uruguayo").
 - Verify that the recipe details, including ingredients, are visible.
2. Initiate Substitution
 - Click on the arrow which is near the substitute.
3. Choose a Substitute
 - From the available options, select a substitute (e.g., "glute-free bread").

The screenshot shows a recipe page for "Chivito uruguayo" with an orange background. On the left, a white box titled "Ingredients" lists: 100 g of ham, 100 g of mozzarella, 100 g of bacon, 20 g of beef brisket, 20 g of bread, 10 g of lettuce, 10 g of tomato, 10 g of egg, 10 g of onion, and 10 g of pepper. Each item has a small orange arrow to its right. On the right, a white box titled "Substitutes" shows "gluten-free bread" selected with a blue radio button. At the bottom center is a green button labeled "Remember my configuration".

- Confirm the substitution.
4. Verify Substitution
 - Check that the ingredient in the recipe details has been updated to the chosen substitute (e.g., "glute-free bread").
5. Save substitution
 - Click the save button.
 - Check whether the modification is saved in profile/ my modifications.

kcal: 1059 protein: 86 g fat: 65 g carbs: 19 g	
Ingredients 100 grams of ham 100 grams of mozzarella 100 grams of bacon 20 grams of beef brisket 20 grams of gluten-free bread 10 grams of lettuce 10 grams of tomato 10 grams of egg 10 grams of onion 10 grams of pepper	Steps Crush the meat so that it is finite and we put it on a griddle to brown. Put the eggs, bacon and ham to fry. Cut the bread in half, put the beef brisket, the fried eggs, the bacon, the ham, the mozzarella, the tomato and the lettuce. Cover with the other half of the bread and serve.

Edge Cases

1. Unavailable Substitutes

- Attempt to substitute an ingredient that has no available alternatives.
- Expected Result: There is no arrow near these ingredients.

Expected Results

1. Users can substitute ingredients easily from a list of compatible options.
2. The system reflects updated ingredient details and nutritional values after substitution.
3. Users can revert substitutions to the original ingredient without issues.
4. Substitution suggestions are contextually appropriate and based on user preferences or dietary requirements.
